Continuation:

Applicant argues, "Gibson does not disclose nor suggest positioning and sizing the translation window and the web page window so that "the translation window and the web page window fit on once screen without overlapping", on page 7, paragraph 3. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See In re Keller, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); In re Merck & Co., 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Gibson teaches, (C.9.lines 35-40), "the invention can alternatively be implemented to generate separate parent browsers for each frame..." and explicitly teaches opening a web page window containing a secondary web page wherein both windows are positioned and sized so that the windows fit on one screen without overlapping, the procedure for this is thoroughly taught in C.8.line 14-C.9.line 20, and as it relates to separate parent browsers, C.9.lines 35-40, the procedure (C.8.line 14-C.9.line 20) is claimed by Gibson to use the methodology as taught by therein by Gibson, which is interpreted as the logic therewith, as having the parent browsers tiled, accounting for positioning and sizing, without overlapping on one screen. Word Reference teaches having a translation window that is created by a program associated with a primary web page and is opened in conjunction with a web page window (WordReference drawing, WordReference.com-web page), an input field for a user to provide information in a first language (WordReference drawing, web page), a translator that is linked to a translation dictionary database, (WordReference drawing-information is translated on-line/Internet, from a first language into a second language which inherently requires a link to a database/dictionary), and an output field comprising information in a second language corresponding to a translation of the information in the first language (WordReference drawing, web page-"luchar"). Therefore, at the time of the invention, it would have been obvious to one ordinarily skilled in the art to combine Word Reference with Gibson by having a translation window as a first parent browser which is tiled, therefore non-overlapping, to a web page window as a secondary parent window, thereby fitting on one screen without overlapping. The motivation for doing so would have been to have two web pages concurrently displayed for manipulation and managing (Gibson C.5.lines 10-12), thereby allowing one to view that translation web page along side a desired secondary web page, without having the view of either page obstructed by either opposite page. Applicant's arguments, on page 7 paragraph 3, "In contrast, the present invention teaches how to size and positon separate windows that were not previously laid out as frames such that they do not overlap; and the present invention does not rely on HTML FRAMESET TAG." is not claimed.
